

BELLI ACRES PEDIATRICS

Flu vaccine

(as of 08/30/2017)

Injectable flu vaccine has arrived. Yes, the shot!. FluMist (the nasal vaccine) has been shown to be ineffective in children. Therefore there will be no FluMist offered, again, this year at any locale.(i.e school!)

We have received a supply of injectable flu vaccine with preservative free vaccine available for our infants six months to 3 years of age. All patients 36 months and older will receive the traditional flu vaccine.

Call for an appointment for your flu shot.

We, strongly, encourage all of our patients older than 6 months receive flu vaccine.
